Security &
Counterintelligence
Group LLC

COMPANY PROFILE

SCG Security & Counterintelligence Group LLC was founded in 2012 in Zug, in the heart of Switzerland.

SCG Security & Counterintelligence Group LLC was set up with the goal to offer a complete range of solutions in security related fields such as intelligence, counterintelligence, IT-security, counter-terrorism and physical security. Operating in each individual field the client is served with a complete solution packet covering his tasks in a discreet and single-sourced manner, without the less secure and less confidential involvement of multiple sources.

Specialized in the fields of intelligence and ECM (electronic counter measures), SCG Security & Counterintelligence Group LLC offers a wide range of state-of-the-art hardware and software products as well as security audits and courses in counterintelligence and IT security, including penetration testing and ethical hacking.

The founders of the company have experience of more than two decades in the industry of intelligence and counterintelligence technologies. The team today consists of specialists in each category with long-term experience in the respective sector.

In order to be able to offer efficient countermeasures, one has to be an expert on the side of the "attacker".

Only knowing the latest technologies in intelligence gathering or counterintelligence allows us to see the "security hole" which is exploited to take advantage over the opposite party.

As espionage and counterintelligence operations are carried out by hardware and IT technologies, SCG Security & Counter-intelligence Group LLC offers solutions in both fields.

Working on both sides of the fence (intelligence and ECM) enables the company to test the latest technologies in both sectors and to customize client solutions in order to offer a technical operational advantage towards the adversary.

The founders were also pioneers in the RCIED jamming technology – systems were initially developed in cooperation with European military departments.

Collaboration and equipment trials with NATO not only allowed to understand the problematics and latest threats in crisis regions but also to develop RCIED jamming solutions solving problems such as the incompatibility of different jamming products applied to the same territory (e.g. reactive jamming systems where adversarial and friendly RF signals have to be distinguished).

The company's clients belong to the Military, Special Forces, Presidential Guards, Police, Secret Services, Prisons, NGO's and Multinationals, Anti-Corruption Committees, Banks and Security Companies.

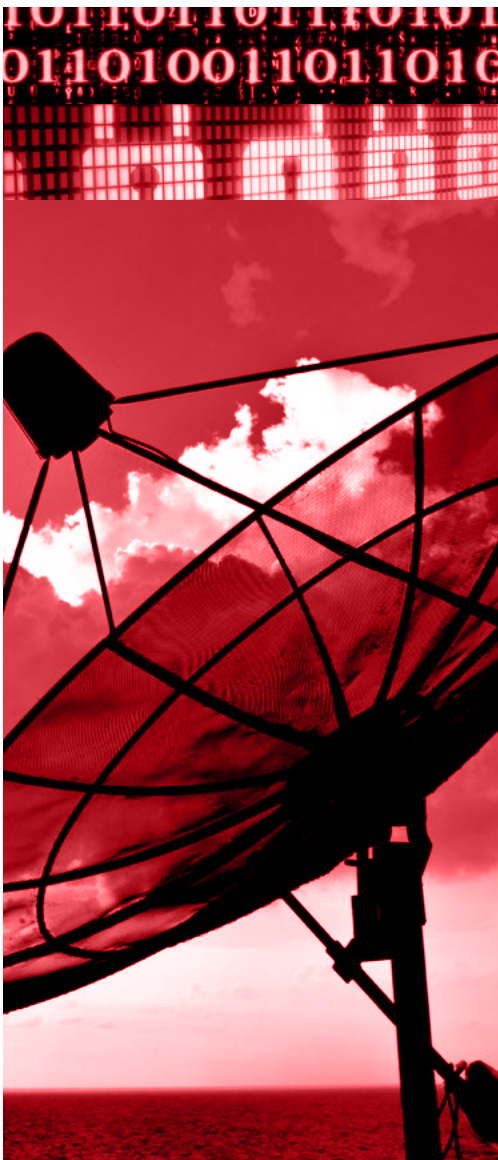

References are satisfied clients in the riskiest crisis regions, relying daily on the company's products to withstand terrorism attacks. In close collaboration with the clients the company strives for continuous research and development in order to offer countermeasures adapted to the continuously evolving threats.

Most of the products are manufactured by SCG Security & Counterintelligence Group LLC and may be delivered OEM branded and customized to the client's requests. To offer highest security levels certain products such as mobile phone encryption are offered client personalized features.

The company offers also technology transfer, consulting or product development.

After sales service and continuous sharing of knowhow and experience with the clients are of prime importance.

As a privately owned Swiss company, SCG Security & Counterintelligence Group LLC remains true to principles as quality, privacy and neutrality.

PORTFOLIO

Products | Services | Training

INTELLIGENCE

Interception / Monitoring Systems:

- Nationwide Mobile phone / Satellite phone / Internet Monitoring
- Tactical Satellite Phone Interception
- Tactical Mobile Phone Interception
- Tactical Wi-Fi Interception
- HF Monitoring
- IT Intrusion / Monitoring Software
- Mobile Phone Monitoring Software

Audio Surveillance:

- Audio Transmitters (Digital, Encrypted, Remote Controlled)
- Body Worn Camouflaged Audio Transmitters / Recorders
- Wall Stethoscopes
- Laser Monitoring System
- Telephone Landline Transmitters / Recorders

Video Surveillance:

- Video Transmitters (Digital, Encrypted, Remote Controlled)
- Body Worn Camouflaged Video Transmitters / Recorders

COUNTER-INTELLIGENCE

- RF Detectors
- Detector of GSM Interception System (Active)
- RF Wide-Spectrum Analyzers
- Non-Linear-Junction Detectors
- Encryption (Mobile Phone, Landline, Fax, Email, Radio)
- RF Jamming System

COUNTER-TERRORISM

- RCIED Jammer (Vehicle Installed, Manpack, Fixed, Mobile)
- Drone / UAV Defence System
- Car Bomb Detector
- Surveillance Drones
- GPS / RF Tracking System For Persons And Assets

PHYSICAL SECURITY

- Intrusion Detection System
- Surveillance Radar System

SERVICES & COURSES / TRAINING

Counterintelligence:

- Counterintelligence Sweepings
- Counterintelligence Courses

Security Audits / Ethical Hacking:

- Security Audits & IT Network Penetration Testing
- Ethical Hacking Courses (Beginner - Advanced Level)
